

InfiniBand Low-Latency Technical Forum to be Held September 17 in San Francisco

The InfiniBand Trade Association and the OpenFabrics Alliance will host the InfiniBand Low-Latency Technical Forum on September 17 at Moscone Center West in San Francisco. The event is being co-located with the Fall 2007 Intel Developer Forum (IDF).

The one-day conference begins at 8:30 a.m. with a keynote from Jacob Hall, product management, platform design & data center manager at Wachovia.

The keynote will be followed by an exciting day, including presentations and collaborative sessions that examine latency in high-performance computing, storage and enterprise environments. The sessions will emphasize how end-user deployments of InfiniBand technology result in a positive return on investment.

A cocktail reception will be held from 5:45-6:45 p.m. in the Moscone Center West Alumni Lounge. Light appetizers will be provided along with an open bar and plenty of networking opportunities with industry influencers.

Attendees may register online at www.regonline.com/InfiniBandTechForum for only \$199.
