Welcome to the 10th OFA Workshop

#OFADevWorkshop
Things to be sure to cover

- Workshop theme: “Disruptive Technology”
  - h/w – the stuff going on around us
    - The NVW talks
    - The processor panel
  - s/w – the stuff we’re doing to ourselves (for good reason)
    - OFI WG

- A couple of especially important blocks of talks
  - Exascale radio astronomy

- Acting on the imperatives defined at last year’s workshop – a broader way of thinking about OFA development?
A short story

Last year we undertook an objective to drive the OpenFabrics Alliance forward.

Only problem was nobody really knew how to do that.

We’ve made quite a bit of progress since then.

You may see this reflected in this year’s workshop agenda.
From last year

At last year’s workshop, this challenge was offered:

But how to do that?
Meanwhile…

Fall 2012, the TAC had been looking to update the canonical OFA stack diagram,
Meanwhile…

…but soon realized that tinkering with the plumbing is really just re-arranging the deck chairs.
Meanwhile…

What we really needed was to figure out what kind of deck chairs were needed.
The novel conclusion was to focus on applications as key drivers in developing OpenFabrics Software.
Which is what drove the agenda for last year’s workshop.
TAC decides to focus on applications as a key driver for OFS

2013 workshop challenge: “let the s/w lead”

Summer 2013 the OFI WG is formed with the charter to come up with interfaces that meet the needs of applications.
The OFI WG example

TAC decides to focus on applications as a key driver for OFS

2013 workshop challenge: “let the s/w lead”

Summer 2013 the OFI WG is formed with the charter to come up with interfaces that meet the needs of applications.

But which applications???
Beginning with the stack diagram

- IP-based and Sockets-based apps
- Various MPIs
- Block Storage Access
- Clustered DB Access
- File Systems Access
The ways that data is organized, so value can be extracted.

How users store and access data, and collaborate through data. Sometimes over a distance.

Parallel programming models for processing data.
A slightly different way of looking at how OFS is developed

Consumers of OFS
  e.g. app developers, distros, kernel, vendors…

OFS Developers

Those who are deploying OFS
  e.g. an Enterprise Storage team

An Interest Group

Distributed computing
Data Storage & Access
Data Analysis
Sockets Applications
Which brings us to this year’s agenda

Robust discussion of Disruptive Technologies
- NVM
- Processor architectures and how that impacts us as I/O providers

Many topics related to the four broad classes of applications – “interest groups”
- Block storage
- File I/O
- Data analysis
- Distributed computing, including both MPI and PGAS topics
- Sockets applications support – rsockets, SMC-r

Scalability
- Dr. Sterling’s keynote
- Exascale Radio Astronomy sessions
As with last year, we will follow-up on Wednesday to see if we can draw any useful conclusions on this.

Meanwhile, enjoy the workshop!
Thank You
